Individual Participant Report

2026

PARTICIPANT_NAME

Your Leadership Profile

Participant name

A snapshot of your evaluation

Evaluation points eg (Initial, Delayed)

About your results

This report provides an overview of your individual leadership capability results. Your results are organised across three key areas: Insight, Influence and Impact, highlighting your current strengths and opportunities for development.
Your results are presented alongside relevant cohort and benchmark data to provide context and support reflection on your leadership development.

INSIGHT

+4

68 → 72

BENCHMARK COMPARISON

70

understanding yourself and your environment

Self-awareness, purpose and informed decision-making.

INFLUENCE

+10

68 → 78

BENCHMARK COMPARISON

70

Working effectively with others

Collaboration, relationships and navigating complexity.

IMPACT

+12

68 → 80

BENCHMARK COMPARISON

74

Making a meaningful contribution
Motivation, belonging and connection to people and place

Illustrative data shown for prototype purposes only.

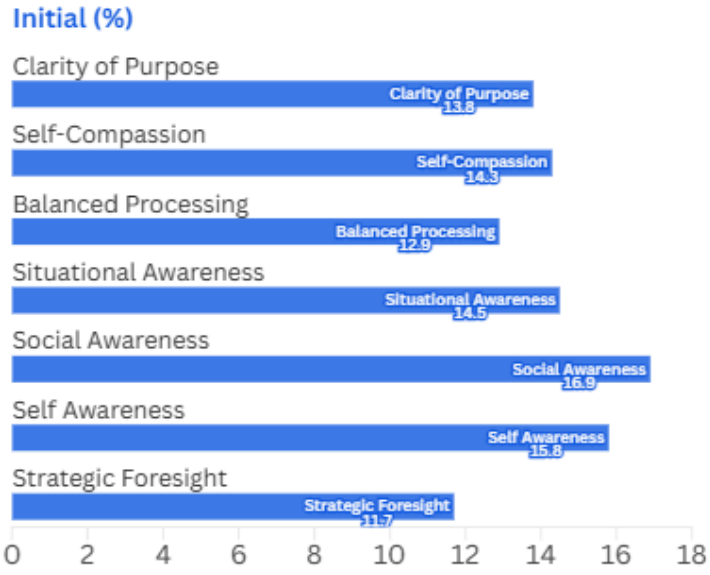

Insights

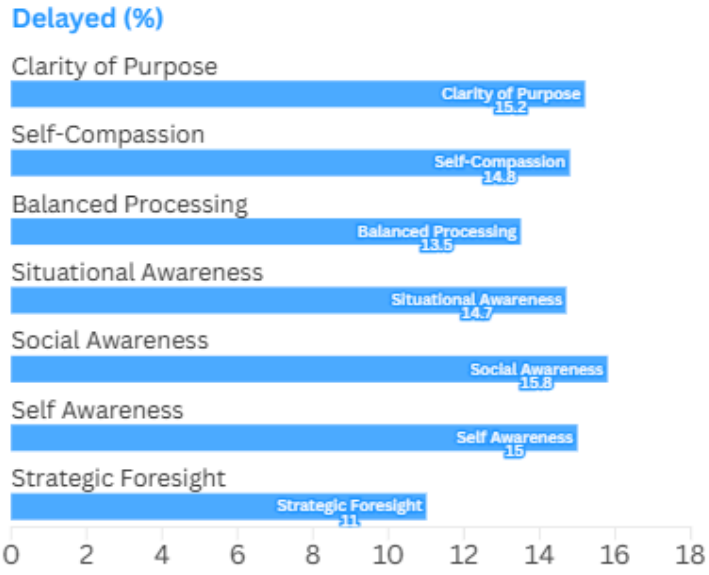

Understanding yourself and your environment

Insight reflects your ability to understand yourself, others and the environment around you. Your results across seven capabilities highlight areas of strength and opportunities for continued leadership development.

Your Results

The graphs below present Insight results across the Initial and Delayed evaluation points. Comparing the seven leadership capabilities across these evaluation points helps highlight areas of relative strength, changes over time and opportunities for continued development.

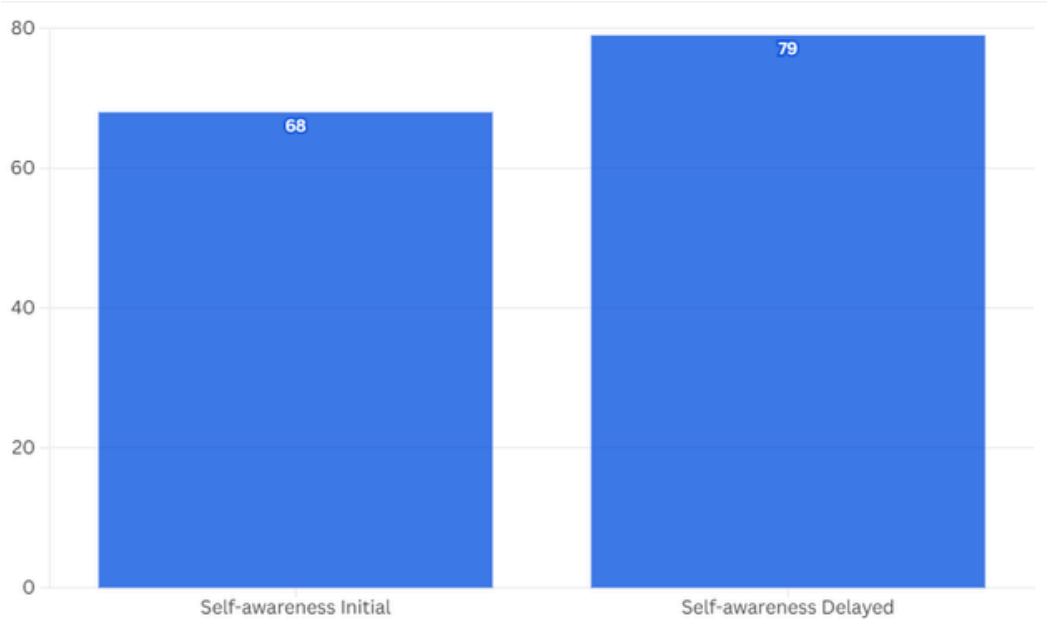

Illustrative data shown for prototype purposes only.

Insights

Self-awareness	The extent to which an individual has actual self-knowledge of emotions, cognitions, and behaviours.

Sample Analysis

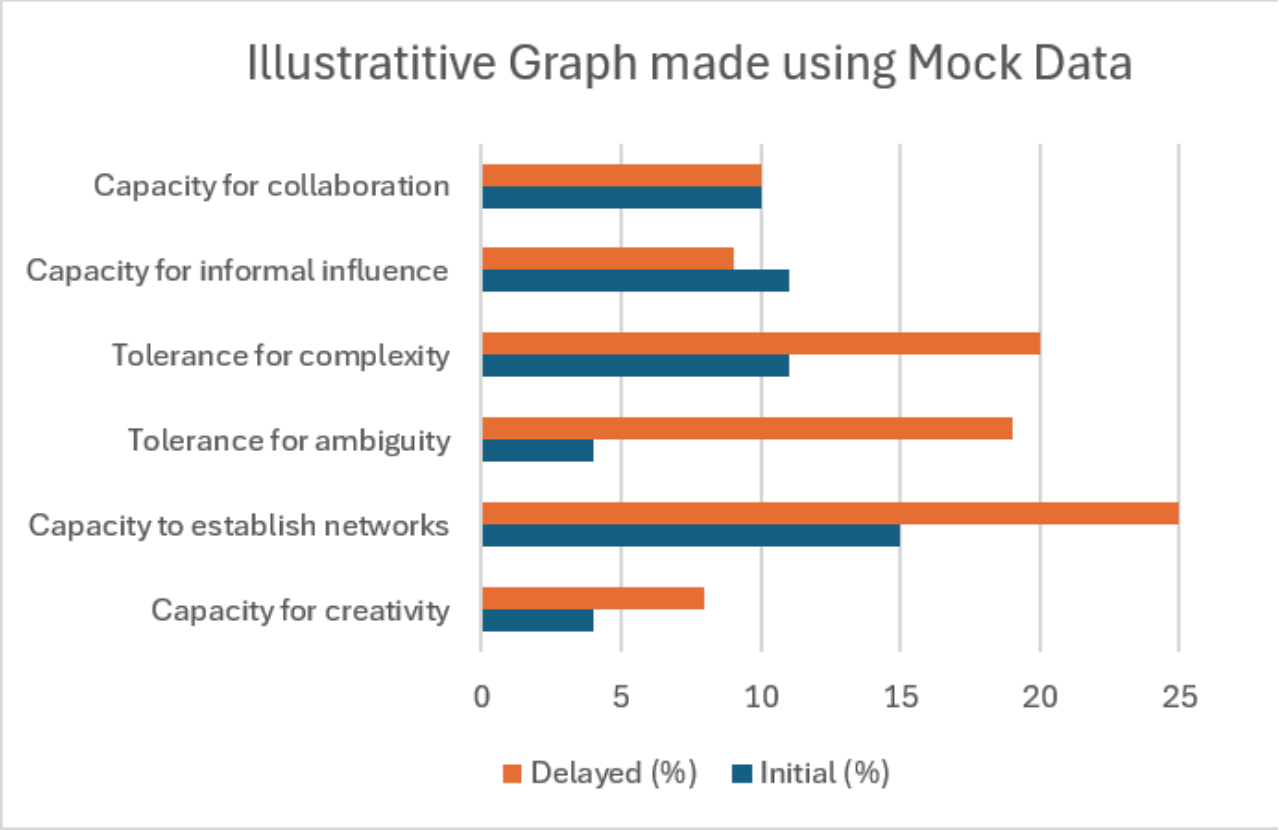

Your Self-awareness score increased from 68 at the initial evaluation to 79 at the delayed evaluation, an 11-point increase. Your delayed score is also 5 points above the Tasmanian benchmark of 74, providing additional context for your result.

DEFINITION TABLES LIFTED FROM SAME REPORTS PREVIOUSLY PROVIDED

Influence

Across influence measures, the following changes were observed:

- Capacity for creativity increased by 4 then 8 percent
- Capacity to establish networks increased by 15 then 25 percent.
- Tolerance for ambiguity increased by 4 then 19 percent.
- Tolerance for complexity increased by 11 then 20 percent.
- Capacity for informal influence increased by 11 then 9 percent.
- Capacity for collaboration increased by 10 then 10 percent.

Illustrative data shown for prototype purposes only.

Influence

Tolerance for complexity	is the degree to which a leader is comfortable in contexts that can never be fully understood.

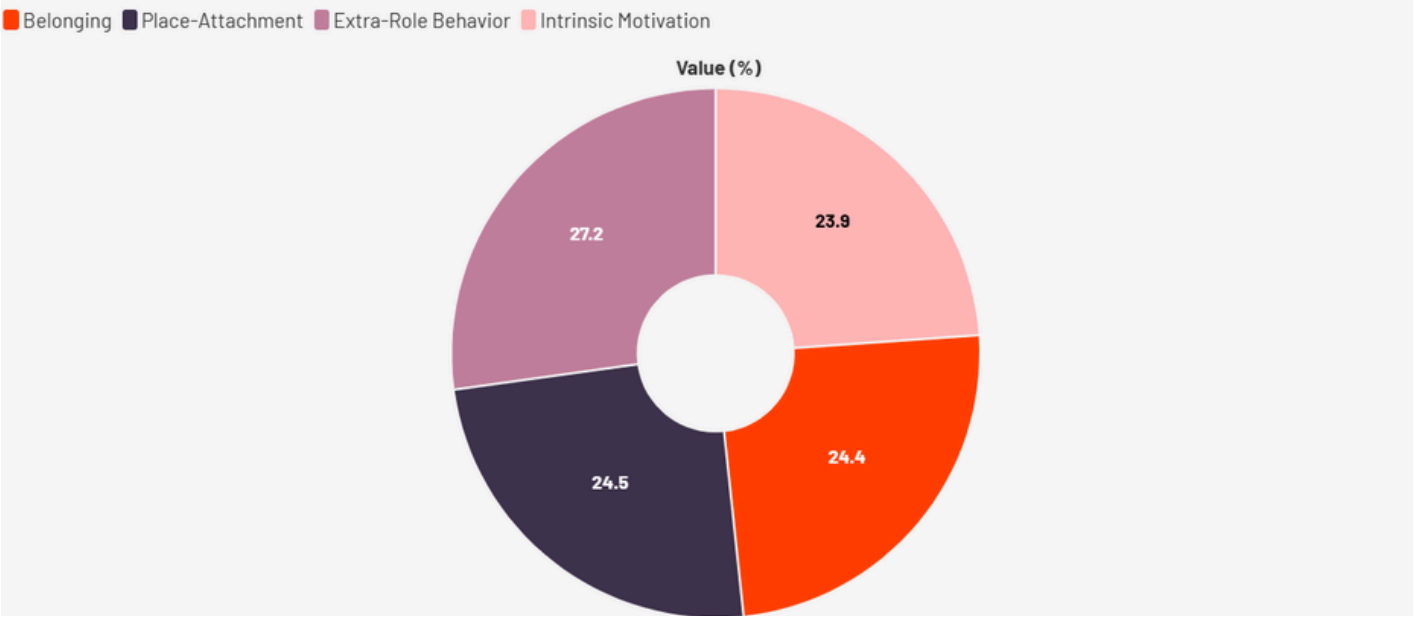

Sample Analysis

DEFINITION TABLES LIFTED FROM SAME REPORTS PREVIOUSLY PROVIDED

Impact

Sample Analysis

Your Impact results are relatively evenly distributed across all four measures, suggesting a balanced Impact profile. Extra-Role Behaviour is your highest result at 27.2%, while Intrinsic Motivation is your lowest at 23.9%. The small difference between measures indicates that no single area strongly dominates your overall Impact profile.

Scoring Context

Understanding your results

1 – Start with your score

Review your individual result for each leadership capability.

2 – Look at change over time

Compare evaluation points to see where your results have increased, decreased or remained consistent.

3 – Compare with your cohort

Use the cohort result to understand your score in the context of other program participants.

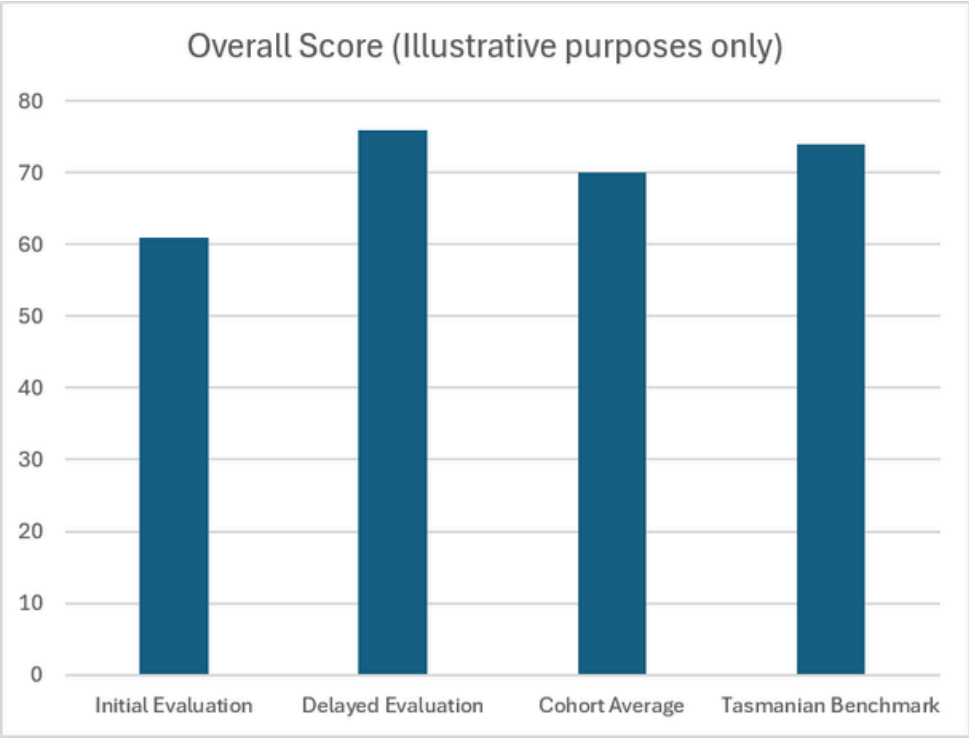

4 – Consider the benchmark/s

Where available, the Tasmanian benchmark provides an additional reference point for interpreting your result.

5 – Look at the overall Pattern

Consider your results together rather than focusing on a single score. Look for consistent strengths, areas of change and opportunities for further development.

Scoring Context

Sample Analysis

This example demonstrates how an individual result can be interpreted alongside change over time and relevant comparison data. The participant's score increased from 61 at the initial evaluation to 76 at the delayed evaluation, representing a 15-point increase.

The delayed score is also shown alongside the cohort average of 70 and Tasmanian benchmark of 74, providing additional context for understanding the participant's result.

Key Takeaways

- +15 points from initial to delayed evaluation
- 6 points above the cohort average
- 2 points above the Tasmanian benchmark
- Comparisons provide context rather than defining a result as inherently “good” or “bad”

Illustrative data shown for prototype purposes only.

A summary of qualitative comments

Profile Notes

Strengths

For Self-Awareness, you were in the top 2% of participants in your program cohort and in the top 8% across all participants.

Your Capacity to Establish Networks increased by 17 points between the initial and delayed evaluations, placing your delayed result 5 points above your program cohort.

Growth Opportunities

Tolerance for Ambiguity may be a key focus area for you. While your result increased by 6 points between the initial and delayed evaluations, your delayed result remained 9 points below your program cohort.

Strategic Foresight may also be an area for continued development, with your delayed result 8 points below your program cohort.

Reflections

Your results increased across most leadership capabilities between the initial and delayed evaluations. Self-Awareness was one of your strongest results relative to other participants, while Tolerance for Ambiguity showed an opportunity for continued development.

Overall, your results show areas of both relative strength and continued growth when considered alongside your program cohort and broader participant results.

Qualitative comments shown are illustrative and included for prototype purposes.

Appendix - Capabilities Definitions

Capacity to foster belonging	Is the ability to help others build meaningful connections in a place.
Capacity to foster intrinsic motivation	Is the ability to help others see activities for their inherent satisfaction rather than external benefit.
Place-attachment	Is the extend to which a person feels connected to, and make decisions with, Tasmania in mind.
Extra-role behaviours	Is the extend to which leaders deploy additional effort beyond requirements to help individuals, their organization or their comunities to flourish.

Tolerance for ambiguity	is the degree to which a leader is comfortable operating with insufficient infomation and general uncertainty/
Tolerance for complexity	is the degree to which a leader is comfortable in contexts that can never be fully understood.
Capacity for informal influence	is the ability to inspire and motivate individuals to acomplish goals of the own volition, regardless of rank or position.
Capacity for collaboration	is the active effort made to build teams through mutual respect and willingness to build shared perspectives.
Capacity to establish networks	is the ability to build new relationships through the deployment of social captial.
Creative decision-making	is the extend to which individual deploy non-traditional methods to build new ideas.

Self-awareness	The extent to which an individual has actual self-knowledge of emotions, cognitions, and behaviours.
Social Awareness	Cognitions that support leaders to understand and interpret the feelings and behaviours of people around them.
Situational Awareness	Cognitions that support leaders to be conscious of the environment and themselves.
Clarity of purpose	The coherence a leader has of their role and organisational objectives.
Strategic foresight	The degree to which a leader emphasises strategic over tactical insights.
Balanced processing	The tendency to consider all relevant information available and use this to make decisions that benefit the collective (e.g. followers).
Self compassion	Self-regulation and attention to getting through adversity with a sense of meaning.

Design notes and comments

Graphs and Data Visualisation

Graphs in this prototype use mock data for visualisation purposes only and do not represent actual participant results or final calculations.

Current graph visuals were created using Microsoft Excel and Flourish to demonstrate the proposed presentation of participant data. Final graphs will use actual participant data and the agreed calculation methodology.

Fonts

Some fonts used in this prototype deviate from the Tasmanian Leaders Brand Style Guide due to accessibility, readability, and software limitations. Where possible, the prototype follows the intended brand typography and visual hierarchy.

Helvetica is used for body text in this prototype to improve readability and visibility. Canva currently provides Mona Sans, but not all required font variations are available. The final implementation will use the appropriate fonts and variations specified in the brand style guide.

Prototype Disclaimers

Red text is used throughout the prototype to identify disclaimers, mock content, and prototype-specific notes. These annotations are for development and review purposes and are not intended to appear in the final participant report.

Dynamic Information

Blue text is used throughout the prototype to identify dynamic information that will change based on the generated report, such as the participant name and selected evaluation point. Red highlighting is for development and review purposes only and is not intended to appear in the final report.

Sample Qualitative Analysis

Sample qualitative analysis presented in this prototype is for demonstration purposes only and is subject to change. Final analysis will reflect the relevant participant data and agreed reporting approach.
